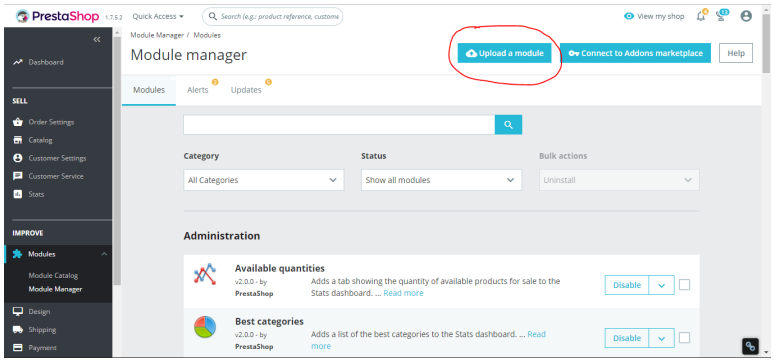
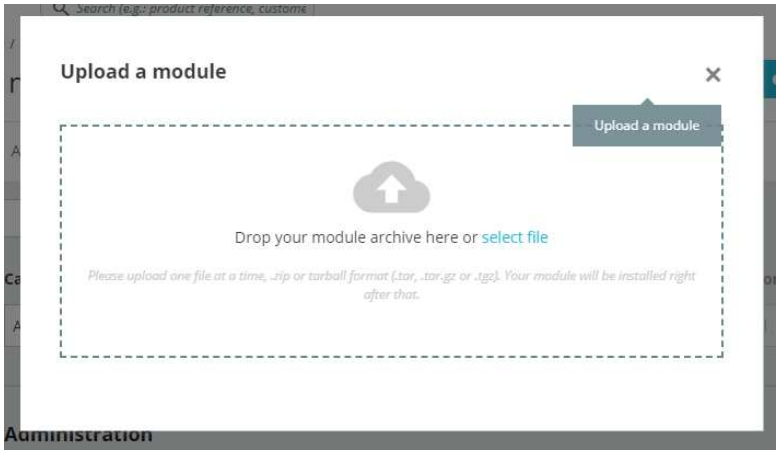
How to install and configure the module “Picking List”

1) Installation :

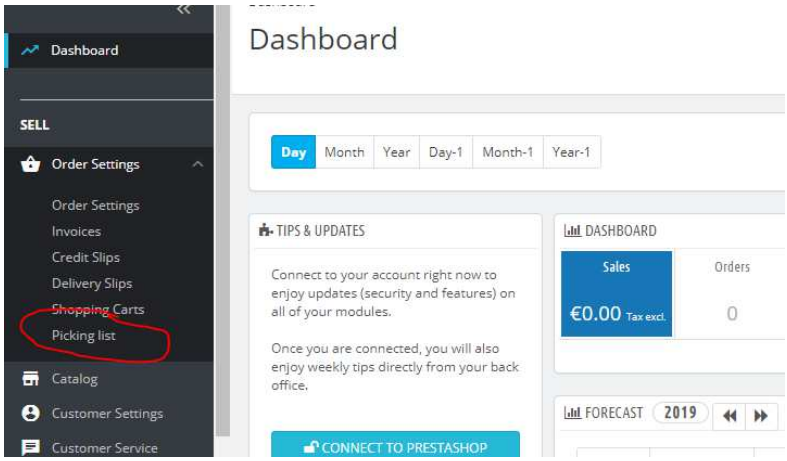
On module manager, click “Upload Module”



Then drop your module ZIP or select file from the browser



After installation you have a new liking « picking list » in the menu « orders »



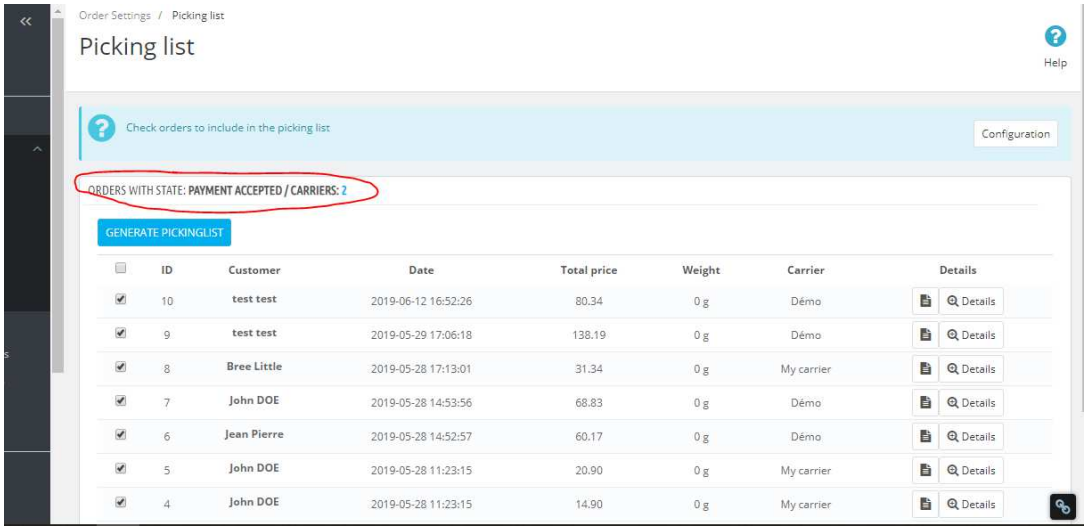
2) Configuration :

Click on the link « pinking list » and you have this new dashboard. Here are displayed all the orders with the state “payment accepted” from all carriers. By default. You can change it in “configuration”

It is the liste of the orders you want to include in the picking list. All the products in theses orders will be on the list.

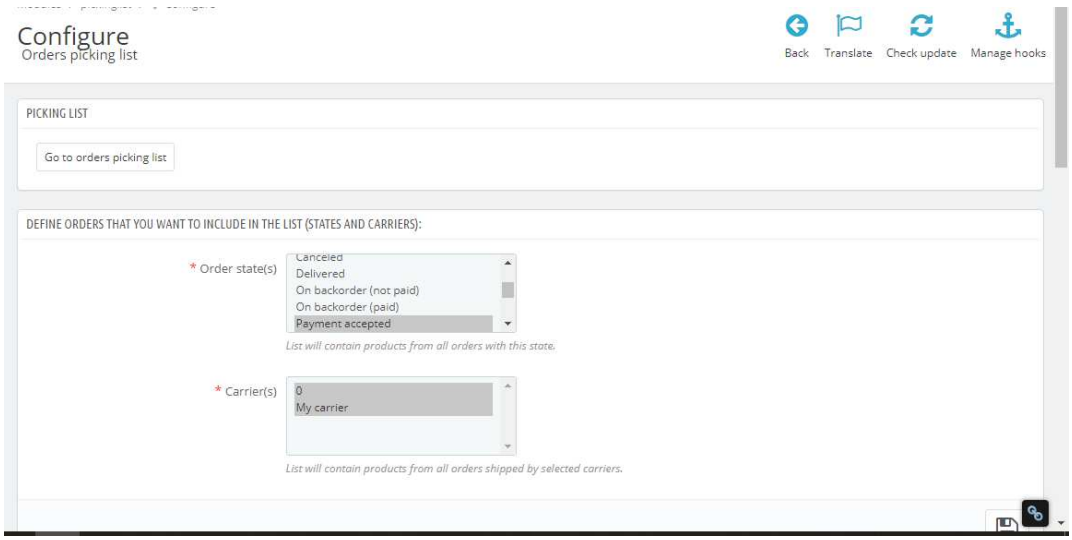
You can add or remove orders manually.

You can generate the list just by clicking on the blue button “generate pickinglist”

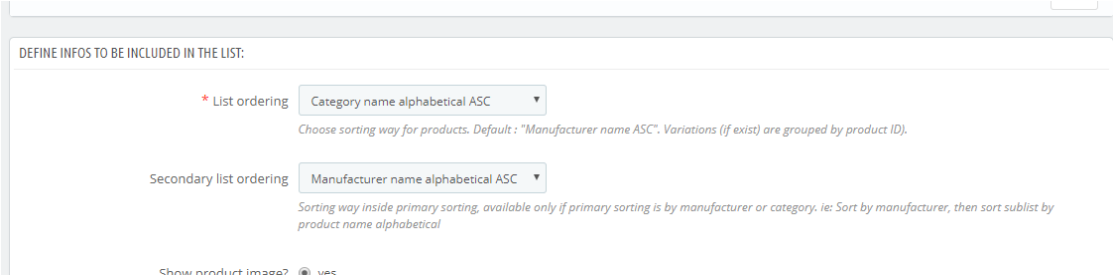


If you clic on « configuration » :

First, you can choose wich orders you want to include in your list. You can select them by STATES or by CARRIERS. You can select one or several states and carriers. Only orders state will appear in the dashboard of the picking list.

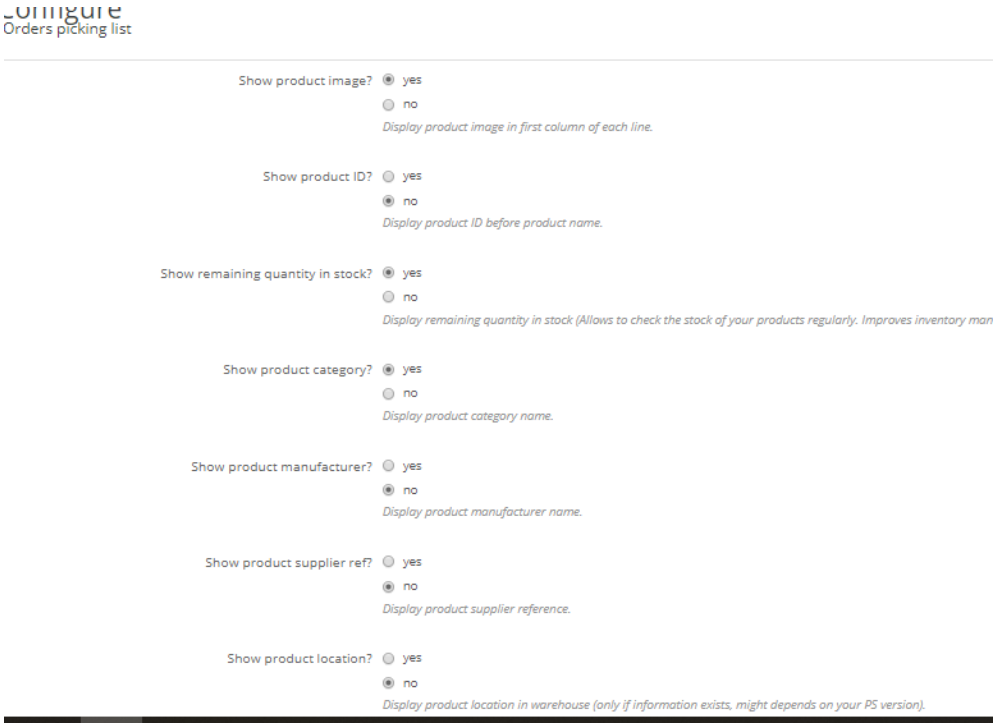


Then you can configure how products will be storing on the list:



You can sort them by name, number, category, brand or location in your wharehouse. If you choose by Category or By Brand, you will be able to do a secondary sort to sort products inside the first one.

Then you can choose what you want to display on the list, the columns:



You can choose to display on the list the image of the product, the ID, the quantity remaining in stock, the category of the product, the brand, the supplier and the location in the warehouse.

The location features work only if the information exist, it will depend on your prestashop version.

After changes you have to click on “Save”
